

CHAPTER V

CONCLUSION AND SUGGESTION

This chapter explained about the conclusion of the research and suggestion of the study.

5.1. Conclusion

This research is conducted to know the improvement and implementation of natural approach using animation video as a media in learning English at eighth grade of SMP N 1 Tahunan. Before conducting the research, the researcher found out the students' problem in learning English. It is about low interest in learning English, after conducting the research, the researcher found that the use of animation video through natural approach can improve the students' interest in learning English. Based on the results of the vocabulary test, the score of the experimental class and control class is higher than before based on the average score. The experimental class received 53.31 at the pre-test, and 87.87 at the post-test. Then, the control class got 46.43 at the pre-test, and 83.06 at the post-test. That means that both of them have improved their score.

The improvement of interest was seen based on the data analyzing, students' post-test score in experimental class and control class were higher than students' pre-test score. It can be concluded that the H_0 was rejected and H_a was accepted. It meant that students' interest in learning English improves after they are taught by using animation video through

natural approach. So, animation video through natural approach gave positive result in teaching of students' vocabulary.

5.2. Suggestion

The researcher would like to give some suggestions as follow:

1. For English Teachers

The teachers should be more creative to create an atmosphere in teaching and learning activities, and in choosing interesting media. One of the interesting and appropriate media to apply is animation video. Because by using animation video, teachers can implement animation video to solve some problems and it has been proven that animation video has a positive effect on teaching vocabulary.

2. For the Students

They have to learn more new vocabulary. They also have to be more active and enthusiastic in learning process. They should be interested in learning all of the subjects, so they can study harder to achieve the knowledge.

3. For the Other Researchers

This research is expected to the additional references and may help them in doing research. The researcher hopes that will be many researchers conduct the research by using animation video to develop their skill.
