

CHAPTER V

CONCLUSION AND SUGGESTION

5.1 Conclusion

In this research, the researcher implemented Kahoot to teach vocabulary. Not only that, Kahoot was also used to **arise** learning motivation. After conducting the research, the researcher got the result. Based on the result of vocabulary test, score of experimental class in manova posttest was higher than score of experimental class in manova pretest. Then, the score of control class in manova posttest was higher than score of control class in manova pretest.

Learning motivation of experimental class in manova posttest was higher than learning motivation of experimental class in manova pretest. Furthermore, learning motivation of control class in manova posttest was higher than learning motivation of control class in manova pretest. It can be concluded that the H_0 was rejected and H_a was accepted. It meant that there was significant difference on the students' score in vocabulary and learning motivation between students who were taught by Kahoot and students who were taught without Kahoot. So, Kahoot gave positive result in teaching vocabulary and learning motivation.

5.2 Suggestion

The researcher would like to give some suggestions as follow:

For English teachers, they have to learn more about Kahoot application. This application could be adopted not only on vocabulary, but also other skills. They also have to consider students' motivation in learning English. The writer suggests teachers to give motivations for the students to learn more, especially in learning English.

For Students, they have to learn more new vocabulary. They also have to be more active and enthusias in learning process. They have to decrease the use of their smart phone. They also should cooperate with other friends in learning English. They should build motivation by themselves.

For other researcher, this research is expected to be example and may help them in doing research, especially in teaching vocabulary and learning motivation. The researcher also hopes this it can give contribution to the next research.
